

Placeholder Paper

A stand-in PDF, committed as a fixture.

It exists so the viewer's `<embed>` path has a valid document to load, and so the asset pipeline is exercised end to end: authored beside the writeup in `content/papers/paper-one/`, mirrored into `public/content/` by the prebuild sync, represented in the VFS as a FileNode carrying `src` rather than inline bytes.

Replace it with the real paper.
